ABSTRACT OF THE DISCLOSURE

15 A drive controlling ^{unit} means includes a final angle position memorizing ^{device} means for
 memorizing a final angle position at a time of termination of the vehicle driving
 operation, an input complete data memorizing ^{device} means capable of switching the memory
 content between a first memory condition and a second memory condition. The first
 memory condition indicates completeness of writing of the final angle position in the
 20 final angle position memorizing ^{device} means. The second memory condition indicates
 failure in writing the final angle position therein. The input complete data memorizing
^{device} means is capable of maintaining the memory content even when the vehicle is
 stationary.
